# Factory Defaults

**Start / End**

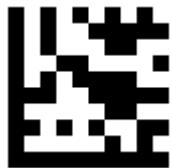

---

Scanning the following barcode can restore the scanner to the factory defaults

**Factory Defaults**

# Basic Settings

Start / End

## Scan Mode

Trigger Mode / **DEFAULT**

Sense Mode

Continuous Mode

Start / End

---

## Sense Mode Sensitivity

Low Sensitivity

Medium Sensitivity /  
DEFAULT

High Sensitivity

# **Decode Redundancy**

The scanner offers three levels of decode redundancy. Select higher redundancy levels for decreasing levels of bar code quality.

As redundancy levels increase, the scanner's aggressiveness decreases. Select the redundancy level appropriate for the bar code quality.

## **Redundancy Level 1**

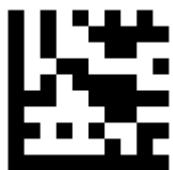

All code types just read one time.

## **Redundancy Level 2**

All code types must be successfully read two times before being decoded.

## **Redundancy Level 3**

All code types must be successfully read three times before being decoded.

Start / End

---

## Decode Redundancy - Continued

1 time / DEFAULT

2 times

3 times

# Decode Area

The scanner offers four settings of decode area.

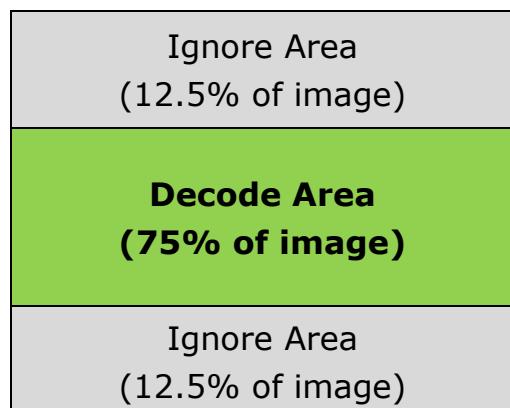

## Full size of image

To decode the barcode within full size of image

## 75% of image

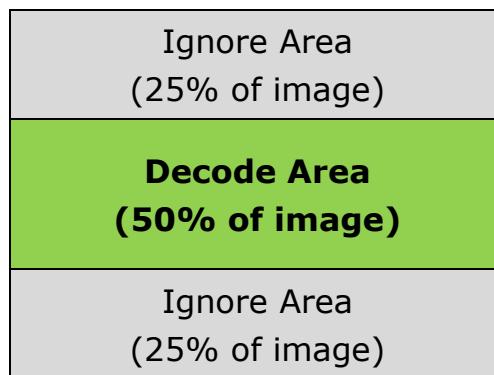

To decode the barcode within 75% of image

## **Decode Area - Continued**

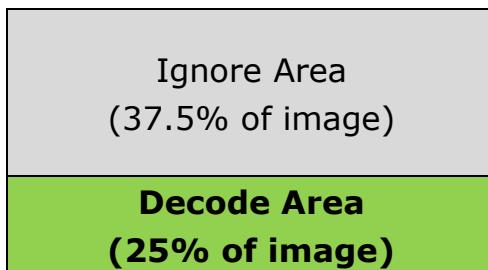

**50% of image**

To decode the barcode within 50% of image

**25% of image**

To decode the barcode within 25% of image

Ignore Area  
(37.5% of image)

Start / End

---

## Decode Area - Continued

Full Size / DEFAULT

75% of image

50% of image

25% of image

## Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. This feature is only applicable to the **Trigger** and **Sense** modes. It is programmable in 1ms increments from 1ms to 60,000 ms. When it is set to 0 , the timeout is infinite. The default setting is 5,000 ms.

### **Set the decode session timeout to 1,500 ms**

1. Scan the **Start** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the "1", "5", "0" and "0" barcodes from the **Digit Number** in Appendix C.
4. Scan the **End** barcode.

Start / End

Decode Session Timeout

## Time to Read Same Barcode

- **Timeout between Decodes**

Timeout between Decodes (Same Barcode) can avoid undesired rereading of same barcode in a given period of time. This feature is only applicable to **Continuous** mode.

It is programmable in 1ms increments from 1ms to 5,000 ms. When it is set to 0, the timeout is disable. The default setting is 1000 ms.

- **Ignore Same Code**

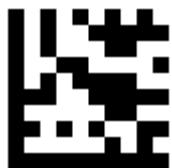

Time to ignore the barcode when read same barcode in a given period of time. This feature is only applicable to the **Sense** and **Continuous** modes.

## **Set the timeout between decodes to 500ms**

1. Scan the **Start** barcode.
2. Scan the **Timeout between Decodes** barcode
3. Scan the "5", "0" and "0" barcodes from the **Digit Number** in Appendix C.
4. Scan the **End** barcode.

## **Set the ignore same barcode to 250 ms**

1. Scan the **Start** barcode.
2. Scan the **Ignore Same Barcode**
3. Scan the "2", "5" and "0" barcodes from the **Digit Number** in Appendix C.
4. Scan the **End** barcode.

**Start / End**

---

## **Time to Read Same Barcode - Continued**

## **Timeout between Decodes / DEFAULT**

Ignore Same Barcode

## **Time to Suspend State**

This parameter sets the time to enter to suspend state when the decoder is idle. This feature is only applicable to **Trigger** mode. It is programmable in 1 ms increments from 1ms to 36,00,000 ms. When it is set to 0, the timeout is disable. The default setting is 15,000 ms.

### **Set the time to suspend state to 2,500 ms**

1. Scan the **Start** barcode.
2. Scan the **Time to Suspend State** barcode
3. Scan the "2", "5", "0" and "0" barcodes from the **Digit Number** in Appendix C.
4. Scan the **End** barcode.

**Start / End**

# Set Lengths for Code 128

- **One Discrete Length**

Select this option to decode the symbol containing a selected length.

Select the length using the numeric bar codes in [ASCII Code](#). For example, to decode only Code 128 symbols with 14 characters, scan **Code 128 One Discrete Length**, then scan **1** followed by **4**.

- **Two Discrete Lengths**

Select this option to decode the symbol containing either of two selected lengths.

Select lengths using the numeric bar codes in [ASCII Code](#). For example, to decode only Code 128 symbols containing either 2 or 14 characters, select **Code 128 Two Discrete Lengths**, then scan **0, 2, 1**, and then **4**.

- **Length Within Range**

Select this option to decode the symbol with a specific length range.

Select lengths using numeric bar codes in [ASCII Code](#). For example, to decode Code 128 symbols containing between 4 and 12 characters, first scan **Code 128 Length Within Range**. Then scan **0, 4, 1, and 2**.

- **Any Length**

Select this option to decode the symbol containing any number of characters within the digital scanner's capability.

Start / End

---

# Data Editing

## Data Format

The scan data is transmitted as below format.

Prefix	AIM ID	Scan Data	Suffix
--------	--------	-----------	--------

## Prefix/Suffix

One to six prefixes and/or suffixes can be appended to scan data for use in data editing.

### Example:

#### Set two Prefixes/Suffixes for all codes

```
<Enter programming Mode>  
<Set Prefix> or <Set Suffix>  
<Set All Codes>  
<Set first code of ASCII Codes >  
<Set second code of ASCII Codes >  
<Exit programming Mode>
```

#### Disable Prefixes/Suffixes for all codes

```
<Enter programming Mode>  
<Disable Prefix> or <Disable Suffix>  
<Set All Codes>  
<Exit programming Mode>
```

Start / End

---

## Set Prefix - Continued

Set Prefix

**Disable Prefix / DEFAULT**

Start / End

---

## Set Suffix - Continued

Set Suffix

**(Default CR for all codes)**

Disable Suffix

## **Truncate Data**

This parameter sets the number of leading or ending data to be truncated. It is programmable in 1 increment from 1 to 99 characters. The default setting is 0.

### **Truncate 5 characters of leading for all codes**

1. Scan the **Start** barcode.
2. Scan the **Truncate Leading** barcode.
2. Scan the **All Codes** barcode.
3. Scan the “5” barcode from the **Digit Number** in Appendix C.
4. Scan the **End** barcode.

### **Truncate 8 characters of Leading for Data Matrix**

1. Scan the **Start** barcode.
2. Scan the **Truncate Leading** barcode.
2. Scan the **Data Matrix** barcode.
3. Scan the “8” barcode from the **Digit Number** in Appendix C.
4. Scan the **End** barcode.

### **Truncate 10 characters of Ending for QR**

1. Scan the **Start** barcode.
2. Scan the **Truncate Leading** barcode.
2. Scan the **QR** barcode.
3. Scan the “1” and “0” barcodes from the **Digit Number** in Appendix C.

4. Scan the **End** barcode.
