# **Registering and Binding**

Binding an account to your nova network helps you secure your nova network and manage it remotely.

#### Binding with third party accounts

After you complete setup and installation using the Tenda WiFi App, a login prompt page appears. You can authorize the Tenda WiFi App to use third party accounts, including **Google+**, **Facebook**, and **Twitter**, to login quickly.

#### Binding with a registered account

You can register a Tenda account to manage your nova network.

#### To Register a Tenda account:

- **Step 1** Run the Tenda WiFi App, and tap (2) on the upper-right corner.
- Step 2 Tap Login.
- **Step 3** Tap **Register** on the upper-right corner.
- **Step 4** Enter a valid email address.
- **Step 5** Customize a password for your Tenda account.

#### Step 6 Tap Register.

A confirmation email will be sent to your email inbox. Check your email and follow the instruction to activate your account. After following these guided steps, your Tenda account will be registered successfully.

### 

After your nova network is bound to an account, login with the account is required for network management. This account is your administrator account.

## **Management Type**

All Tenda nova whole home mesh WiFi systems support the Tenda WiFi App for local and remote management. You can choose either of them as needed.

#### Local Management

Local management indicates that you can use the Tenda WiFi App to manage your nova network after connecting your smart phone to the nova network.

#### Procedure:

- **Step 1** Connect your smart phone to the WiFi network of your nova nodes.
- **Step 2** Run the Tenda WiFi App on the smart phone, and then you can use the App to manage your nova network.

₽TIP

<u>If your nova nodes are bound to a Tenda account</u>, you can manage them only after login with the bound account or other accounts <u>authorized by the account</u>.

#### Remote Management

Remote management indicates that you can use the Tenda WiFi App to manage your nova network anytime, anywhere.

#### Prerequisites of remote management:

- Your nova nodes connect to the internet successfully.
- Log in with the bound or authorized account.

### ₽TIP

- If your nova network is bound to an account, they cannot be bound to another account.
- If you want to use other accounts to manage your nova network, you can <u>authorize these</u> <u>accounts</u> after login with the administrator account.
- Only the administrator account can authorize other accounts to manage the nova network.

#### Procedure of remote management:

- **Step 1** Connect your smart phone to the internet by connecting it to a WiFi network nearby or enabling your mobile data.
- **Step 2** Run the Tenda WiFi App on the smart phone.
- **Step 3** Tap  $\bigotimes$  on the upper-right corner.
- Step 4 Use your account to log in, and then you can manage your nova network remotely.

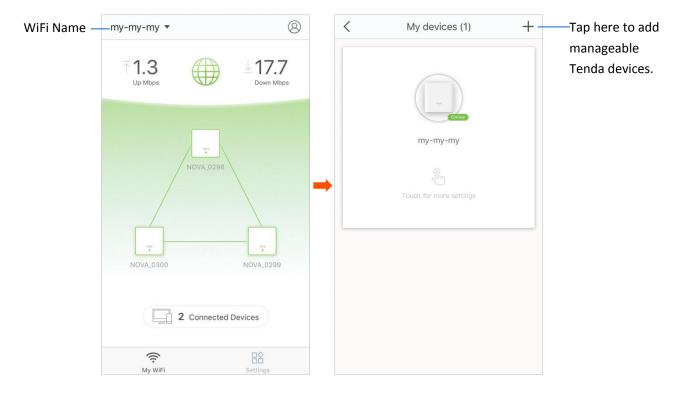

After completing the internet settings, the Tenda WiFi App shows you the following page. You can view the status of your nova nodes, real-time upload/download speed and connected devices, and manage your nova network.

WiFi name —	my-my-my 🔻	8	My Profile	K My Profile

# **Wireless Settings**

In this section, you can change the WiFi name and password of your nova WiFi network.

#### To change your WiFi name and password

- **Step 1** Choose **Settings** > **Wireless Settings** to enter the configuration page.
- **Step 2** Change the WiFi name and password as required.
- Step 3 Tap Save.

## **Guest Network**

The Guest Network function allows you to create a separate network for your guests to secure the main network.

#### Procedure:

- **Step 1** Choose **Settings** > **Guest Network** to enter the configuration page.
- **Step 2** Set the button to the enabled state
- **Step 3** Change the WiFi name, password and validity period as required.
- Step 4 Tap Save.

## **Parental Control**

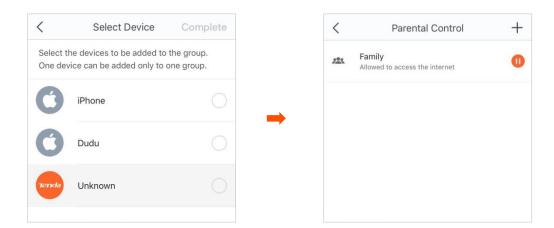

The Parental Control function allows you to create a healthy time session for internet access for your family members.

#### Procedure:

- **Step 1** Choose **Setting > Parental Control** to enter the configuration page.
- Step 2 Create a group.
  - 1. Tap Add Group.
  - 2. Enter a group name, which is **Family** in this example, and tap **Next**.
  - 3. Select the devices to be added into the group.
  - 4. Tap Complete.

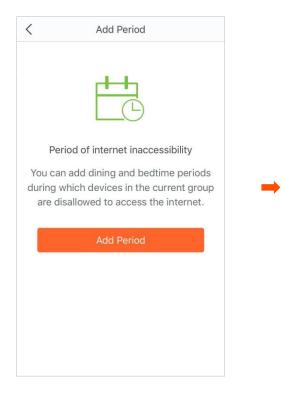

Step 3 Tap <sup>1</sup> or <sup>5</sup> to change the rules.

indicates that the devices in the group are allowed to access the internet.

indicates that the devices in the group are not allowed to access the internet.

- **Step 4** Specify a period for the rule.
  - 1. Choose the group.
  - 2. Tap Period.
  - 3. Tap Add Period.
  - 4. Specify a **Period Name, Start Time, End Time**, and the dates from when the rule takes effect.
  - 5. Tap Save.

## **Internet Settings**

Generally, you complete the internet settings by following the quick setup wizard of the Tenda WiFi App when you set the nova nodes at the first time. If your internet connection type or parameters are changed, you can set them again here to enable your nova nodes to access the internet. The nova nodes support the following four connection types.

- **PPPoE:** If this type is selected, you need to enter the PPPoE user name and password provided by your ISP for internet access.
- **DHCP:** If this type is selected, no parameter is required to enter. The nova node obtains the dynamic IP address and other related parameters automatically from your ISP.
- **Static IP Address:** If this type is selected, you need to enter the static IP address and other related parameters provided by your ISP for internet access.
- **Bridge:** If this type is selected, the nova node can access the internet only after being connected to another router with internet accessibility in wired manner.

The following three connection types are available only when the language of your mobile device used to setup is set to **Russian** or **Ukraine**.

- **PPPoE Russia:** If this type is selected, you need to enter the PPPoE user name, PPPoE password, service name, server name, MTU value, and IP address information (if any) provided by your ISP for internet access.
- **PPTP/PPTP Russia:** If this type is selected, you need to enter the IP address, user name and password of the PPTP server, MTU value, and IP address information (if any) provided by your ISP for internet access.
- L2TP/L2TP Russia: If this type is selected, you need to enter the IP address, user name and password of the L2TP server, MTU value, and IP address information (if any) provided by your ISP for internet access.

If you set the **Connection Type** to **Bridge**, the Guest Network, Parental Control, Port Forwarding, UPnP, DNS, QoS, and DHCP server functions becomes unavailable.

#### Setting up PPPoE

- **Step 1** Choose **Settings** > **Internet Settings** to enter the configuration page.
- **Step 2** Tap **Connection Type**.
- **Step 3** Select **PPPoE**.
- **Step 4** Enter the PPPoE user name and password provided by your ISP.

If a service name and a server name are provided, tap **Advanced** and enter them.

#### **Step 5** Tap **Save**.

< Internet Settings	Save		Internet Settings	Save

#### Setting up PPTP/PPTP Russia

- **Step 1** Choose **Настройки** > **Настройки Интернета** to enter the configuration page.
- Step 2 Тар Тип подключения.
- Step 3 Select PPTP/PPTP Россия.
- Step 4 Enter IP адрес/ Имя PPTP сервера, Имя пользователя and Пароль, and change the MTU value as needed.

If a static IP address and related information are provided, set the Получить IP адрес автоматически

button to state, and enter them as well.

#### Step 5 Tap Coxpaнить.

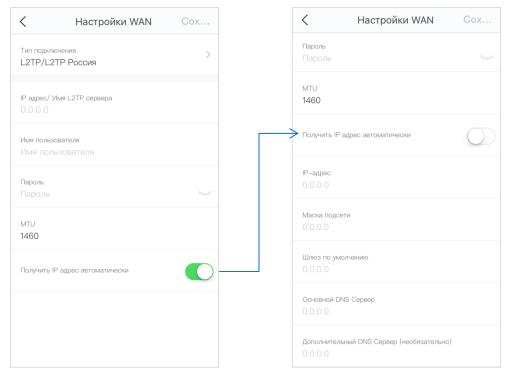

#### Setting up L2TP/L2TP Russia

- **Step 1** Choose **Настройки** > **Настройки Интернета** to enter the configuration page.
- Step 2 Тар Тип подключения.
- Step 3 Select L2TP/L2TP Россия.
- Step 4 Enter IP адрес/ Имя L2TP сервера, Имя пользователя and Пароль, and change the MTU value as needed.

If a static IP address and related information are provided, set the Получить IP адрес автоматически

button to state, and enter them as well.

#### Step 5 Tap Coxpaнить.

### QoS

The QoS function prioritizes gaming and web browsing activities.

#### To enable the QoS function

**Step 1** Choose **Settings** > **QoS** to enter the configuration page.

**Step 2** Set the button to the enabled state .

Step 3Enter download and upload speed based on your bandwidth value.If you don't know the value, tap **Online Test** or ask your ISP.

Step 4 Tap Save.

### ₽<sub>TIP</sub>

To get an accurate value, ensure that wireless devices connected to your nova network have no internet activity when you operate online test.

Save
$\bigcirc$

## Add nova

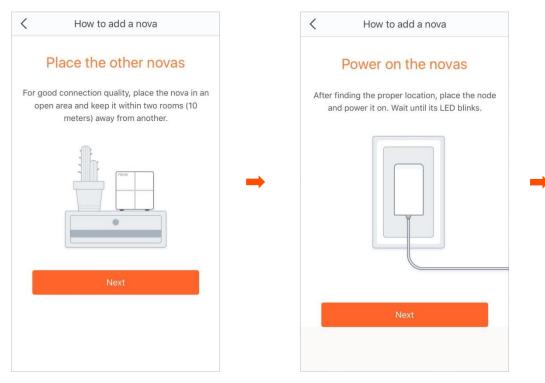

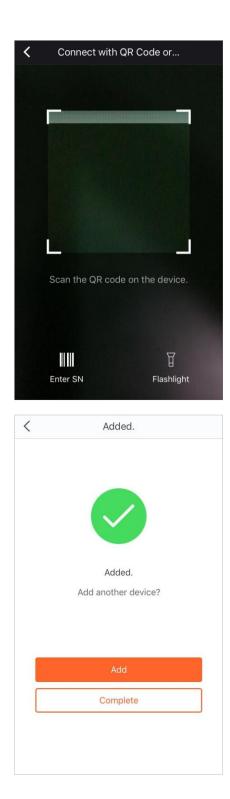

If you want to expand your WiFi coverage, you can add nova nodes coming with different models to your existing nova network. The maximum number of the nova nodes supported in a nova network is shown in the following table.

Model	MW2	MW3	MW5/MW5s	MW6	MW12
Max. nova nodes	2	5	6	٩	12
supported	5	5	0	5	12

#### To add another nova node into your existing nova network

- **Step 1** Choose **Settings** > **Add nova** to enter the configuration page.
- **Step 2** Follow the on-screen guide to complete the settings.

Connecting	
Connecting Please wait.	

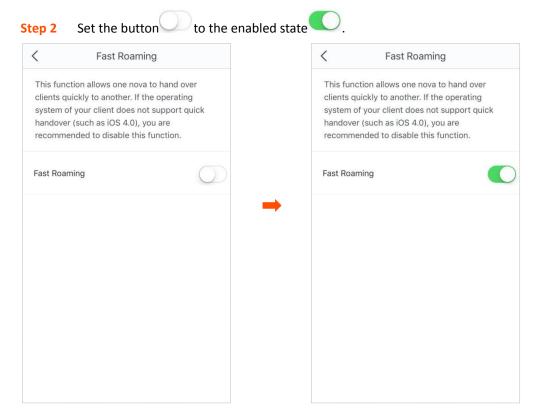

# **Fast Roaming**

The Fast Roaming function lets you enjoy uninterrupted internet service when moving around your house.

#### To enable the Fast Roaming function

#### **Step 1** Choose **Settings** > **Fast Roaming** to enter the configuration page.

## **Smart Assistant**

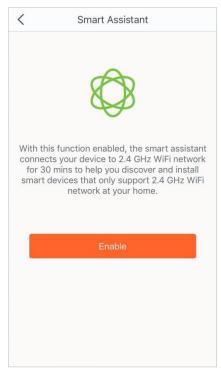

With this function enabled, the mobile device used to do the setup, such as your smart phone, is connected to 2.4 GHz WiFi network for 30 minutes. This is to allow the mobile device to discover and set up smart home devices that only support 2.4 GHz WiFi networks.

#### To enable the Smart Assistant function

#### **Step 1** Choose **Settings > Smart Assistant** to enter the configuration page.

#### **Step 2** Tap **Enable**.

# **Port Forwarding**

The Port Forwarding function enables users to access your LAN resources, such as resources on the web server or FTP server, through the internet.

#### **Procedure:**

**Step 1** Choose **Settings** > **Port Forwarding** to enter the configuration page.

- Step 2 Tap Add rule.
- **Step 3** Select the device to which the rule applies.
- Step 4 Tap Next.
- **Step 5** Set up a port forwarding rule.
  - Common Protocol/Port: optional. The App presets some common protocols and their port numbers, such as FTP, TELNET, and so on. You can select one as required, and the Internet Port Number and External Port Number are automatically populated. If the port numbers you want to set are not included, you can set them manually in the Internal Port Number and External Port Number boxes.
  - Internal Port Number: Enter the service port of the corresponding server on the LAN device.
  - **External Port Number**: Enter the port which is enabled for the internet users.
  - **Protocol**: Select the protocol of the service. If you are not sure about it, you can select **TCP&UDP**.

Step 6 Tap Save.

< Port Forwarding	<	Select Device	Next	C Port Forwarding Rule Save
• •	0	Dudu 192.168.5.101	۲	Dudu 192.168.5.101
	0	iPhone 192.168.5.115	0	Common Protocol and Port (Optional)
The port forwarding function enables				Internal Port Number
users to access your LAN resources through the internet. For example, if a web server or an FTP server is set up on a				External Port Number
LAN host, users can access the server through the internet after the port forwarding function is configured.				Protocol TCP&UDP TCP UDP
Port forwarding is usually used for some proxies, such as the POP3, SMTP, and TELNET proxies.				After the settings are saved, the IP address currently assigned to this device is bound to the device.
Add Rule				

After completing the settings, internet users can visit "**Protocol name://WAN port IP address of the nova node:External port**" to access LAN resources.

### 

- Ensure that the WAN IP address of the nova node is a public IP address, and the internal port you entered is correct.
- Security software, antivirus software, and the built-in OS firewall of the server may cause port forwarding function failures. Disable them when using this function.
- Manually set an IP address for the web server to avoid the service disconnection caused by the dynamic IP address.

## UPnP

### UPnP

After the UPnP function is enabled, it can automatically enable ports for UPnP-supported programs, such as P2P and gaming software, in the internal network for a smoother network experience.

#### **To enable/disable the UPnP function:**

**Step 1** Choose **Settings** > **UPnP** to enter the configuration page.

<	UPnP	<	UPnP		
the UPnP fi can automa compliant p	ort for Universal Plug and Play. JPnP	C	) UPnP		$\bigcirc$	

## **DHCP Server**

The DHCP Server function allows you to change the IP addresses assigned to all devices that are connected to the nova network.

- To change the LAN IP address of the nova node:
- **Step 1** Choose **Settings** > **DHCP Server** to enter the configuration page.
- **Step 2** Select a LAN IP address for the nova node.
- Step 3 Tap Save.

Current LAM			
1	0	N 3	
17	2	4	
19	2.168.	5	1
		6	2
		7	3

### DNS

If clients connected to the nova network cannot access the websites using the domain names, but the IP address works, it may be due to a DNS resolution problem. You can try changing the DNS settings to solve the problem.

#### To change the DNS settings:

- **Step 1** Choose **Settings** > **DNS** to enter the configuration page.
- **Step 2** Select **Automatic (default)** or **Manual**.
- **Step 3** If you select **Manual**, enter the correct DNS IP address in the **Primary DNS Server** box. If you have another DNS server IP address, enter it in the **Secondary DNS Server** box.

#### Step 4 Tap Save.

Automatic (default) Primary DNS Server 192.168.10.10	
Secondary DNS Server (optional) 0.0.0.0

Secondary DN 0.0.0.0	S Server (optional)	

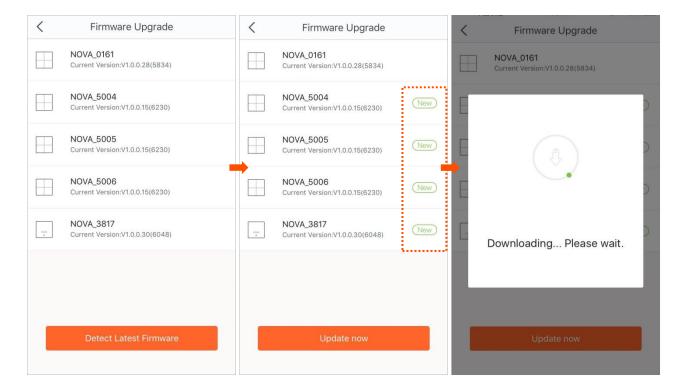

# **Firmware Upgrade**

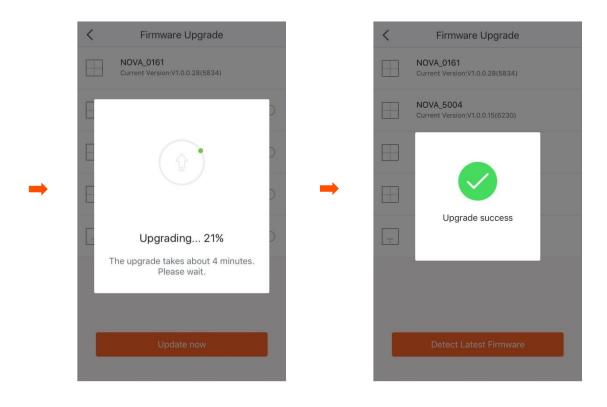

### Ŷ

Tenda is dedicated to improving its products to let users enjoy better performance. Please update the firmware when the App prompts a new firmware version is available.

#### To update the firmware:

- **Step 1** Choose **Settings** > **Firmware Upgrade** to enter the configuration page.
- Step 2 Tap Detect Latest Firmware.
- **Step 3** The New icon appears if a new firmware version is detected. Tap **Update now** to upgrade these nodes.
- **Step 4** Wait until all nodes complete the upgrade, and then continue to manage them.

### 

Do not remove the power supply of the nova nodes when upgrading.

# **Maintenance Schedule**

The Maintenance Schedule function makes the nova nodes reboot at specified time to keep the nova nodes in good condition.

- **To set up the Maintenance Schedule function:**
- **Step 1** Choose **Settings > Maintenance Schedule** to enter the configuration page.
- Step 2 Set the button to the enabled state
- **Step 3** Select a **System Reboot Time**. You are recommended to set a time when your network is idle.
- **Step 4** Select the dates on which the rule takes effect.
- **Step 5** Enable or disable the **Delay Reboot** function as required.
- Step 6 Tap Save.

<	Maintenance Schedule	Save
Mainte	enance Schedule	
System 03:00	Reboot Time	
Effective St	e On in Mon Tue Wed Thu Fri	Sat
Delay	Reboot	
1.00000000	reboot when exchanging data with a iter than 3 KB/s.	device

### $\bigtriangledown_{\mathsf{TIP}}$

If the **Delay Reboot** function is enabled, the devices won't reboot at the specified time when the devices are exchanging data and the traffic is greater than 3 KB/s. Within 2 hours after the specified reboot time, the devices keep detecting the traffic, and reboot once when the traffic is lower than 3 KB/s. Otherwise, the devices will reboot the next day at the specified reboot time.

## **Account Authorization**

You can authorize your family members to manage your nova network. An authorized account has the same permission as the bound account except for authorizing other accounts.

#### To authorize another account:

**Step 1** Choose **Settings** > **Account Authorization** to enter the configuration page.

#### Step 2 Tap Add an account.

- **Step 3** Enter a registered account. If you want to authorize a Google+, Facebook, or Twitter account, enter the ID generated at your initial login.
- Step 4 Tap OK.
